"Fibroleiomyoma Sarcomatodes of the Kidney. Case Report"

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 5, 28 Jan 1963, pp 185-186

Abstract: [Author's English summary modified] A woman aged 49, who had been surgically treated 7 years ago because of fibroleiomyoma sarcomatodes of the kidney is reported. The surgical treatment was effective. The literature (31 cases) is briefly reviewed. 24 references, 1 Polish source.

AUTHORS: Azarov, K. P., Gorbatenko, V. Ye., Krolikov, V. N.

TITLE: A Simple Device for Measuring the Thickness of Nonferromagnetic Coatings on Steel (Prostoy pribor dlya izmereniya tolshchiny neferromagnitnykh pokrytiy na stali)

PERIODICAL: Zavodskaya Laboratoriya, 1959, Vol 25, Nr 4, p 486 (USSR)

ABSTRACT: The electromagnetic layer thickness gauges with balanced (Ref 1) and not balanced (Ref 2) bridge offer a high measuring accuracy, but the devices are complicated and not always practicable for use. A pocket layer thickness gauge (Figure) is described which was designed in imitation of a device described in American publications (Ref 3). The working principle of the device is based on the measurement of the attractive force of a permanent magnet of the ferromagnetic basis depending on the thickness of the nonmagnetic coating. The device has the shape of a fountain pen holding the ball-shaped permanent magnet instead of the writing pen. The case of the device is made of organic glass and is provided with a measuring scale. Inside the device, there is a spiral spring; by its stretching, the layer thickness can be read off on the measuring scale depending

Krolikowski, E. The Influence of Variability in Frequency and Voltage on the Operation of Asynchronous Motors.

"Wpływ zmian częstotliwości i napięcia na pracę silników asynchronicznych" Energetyka No 7-8, 1950, pp. 222-228, 5 figs.

A decrease of frequency or rated voltage in the system may, in certain instances cause major complications in the work of asynchronous motors. A fall in voltage, at constant load, causes an increase in the rotor current. An increase in voltage reduces the rotor current. The current in the stator will, in that case, increase or decrease, according to the motor load. A variation in frequency at constant load causes the effect to be reversed. At a simultaneous variation in voltage and frequency, for instance in the case of a stator current and overload capacity remain unchanged, as in the case of work under stated conditions. A fall in voltage and frequency proportionate to the voltage, will cause no danger to asynchronous motors and will even relieve the mains by reducing the reactive currents consumed by the motor.

"Connection Between the Approximation Method of Einstein-Infeld and the Perturbation Method"

Byull. Polsk. AN. Ota, 3, 2, No 8, 1954, 381-383

The method of Einstein-Infeld is applied to Schrödinger's equation of a conservative system under action of a weak perturbation. The unitary transformation is applied to eliminate the Hamiltonian of perturbation from the equation. The result is the known expression of stationary states and therefore this method is equivalent to the conventional procedures of the perturbation theory. (RZhFiz, No 9, 1955)

Author : Krolikowski Wojciech

Inst : University of Warsaw, Poland

Title : Radiation Theory in Crystals

Orig Pub : Acta phys. polon., 1955, 14, No 1-2, 93-105

Abstract : An investigation is made of the radiation of light by an atom located in a crystal. An analysis is made of the interaction between the radiation field and the field of the electrons. The medium is taken into account in the field equation by introducing the currents of the electrons that form the medium, and an unquantized periodic field. An assumption is introduced that the photon in the medium has a non-zero rest mass  $\mu$ , depending on the direction, frequency, and structure of the medium. The solution of the

Card 1/2

Abs Jour : Ref Zhur - Fizika, No 5, 1957, No 10871

equations is obtained with the aid of unitary transformations, analogous to those that lead to the representation of the interaction and which change into the latter when  $\mu = 0$ . The author introduces certain simplifying assumptions: the electrons of the medium, interacting by the radiation, are at the lattice sites; the dimensions of the atoms of the lattice are small compared with the wavelength. It is shown that the solutions obtained by the author for the field equations are analogous to the Ewald classical solution. With this, it turns out to be possible to connect  $\mu$  with the macroscopic index of refraction. It is shown that for electric dipole radiation the probability of emission of a photon with a wave vector  $k = (2\pi/a)m_0$  ( $a$  is the lattice constant,  $m_0$  the reciprocal lattice vector) increases sharply compared with vacuum, while for a magnetic dipole radiation and electric quadrupole radiation, to the contrary, the probability of emission of photons diminishes sharply.
